**RESULTS**

**Baseline Characteristics**
- Most patients were male, > 70 years of age, and had ECOG performance status ≤ 1 (Table 1).
- Most patients were > 70 years of age, ECOG performance status ≤ 1, and had SCC NSCLC.

**LCSS Global and Average Total Scores**
- Mean changes from baseline in LCSS global and average total QoL scores were stable, with higher scores in responders vs nonresponders (Figures 3 and 4).

**LCSS 3-Item Index, Symptom Burden Index, Lung Cancer Symptom burden, and Pulmonary Symptom Scores**
- Throughout induction, LCSS 3-item index scores remained stable, while average symptom burden index and lung cancer symptom scores improved (Figures 5, 6, and 7).
